### **EXAMINER'S AMENDMENT**

Receipt is acknowledged of a response filed by applicants on 5/7/2004. In the amendment filed 5/7/2004 several claims were cancelled (claims 17-30) and claims were amended (claims 1 & 12-13). Claims 1-16 are allowed. The following examiner's amendment to the specification is made to update the status of a related application, 09/872,338, which is cited on the first page of the specification (see the amendment to the specification filed 8/11/2003).

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the specification:

At page 1, line 13, the phrase --and now U.S. Patent No. 6,737,269,-- has been inserted after the words "filed June 1, 2001" and prior to the words "the disclosures of which".

### ***Reasons for Allowance***

The following is an examiner's statement of reasons for allowance: applicants' arguments and amendment of the claims have obviated all of the outstanding grounds of rejection. In particular, in order to maintain the art rejections of record over the teachings of Bailey et al (U.S. Patent No. 5,416,008), the examiner would have to be able to demonstrate that the particular

Art Unit: 1636

construct VIII exemplified in Example 2 would necessarily act as a bistable genetic toggle switch as recited in the claims and defined in the instant specification. For example, there is no convincing evidence in the teachings of Bailey et al that their exemplified embodiment would necessarily remain in the “high” expression state for CAT even in the absence of the IPTG inducer. Applicants have demonstrated that it is the relative promoter/operator/repressor strengths that function to allow the genetic switch to function as a genetic “toggle” where the system is stably maintained in one state or the other in the absence of a switching agent. While applicants have not produced data that indicates that the exemplified embodiment taught in Example 2 would necessarily not possess the characteristics that are recited in the amended claims, the examiner cannot point to convincing evidence that the specific embodiment taught by Bailey et al would *necessarily* possess the characteristics of a genetic toggle switch as recited in the amended claims. Therefore, the examiner would not be able to sustain an inherency argument for rejecting the instant claims over the teachings of the Bailey et al patent. Nor do Bailey et al teach or suggest applicants’ approach for optimizing the combination of promoter/operator/repressor elements for developing a genetic “toggle switch” as is recited in the instant claims and described in the instant specification. Thus, the amended claims are free of the art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

***Information Disclosure Statement***

A supplemental copy of the PTO Form 1449 for the information disclosure statement filed 3/03/2003 has been mailed with this action. On the copy mailed with the office action of 4/9/2003 the examiner inadvertently did not initial the cited patent and application documents. This has been corrected on the supplemental copy of the PTO Form 1449. All references cited on the IDS have been fully considered.

***Conclusion***

Claims 1-16 are allowed.
